

LETTER FROM THE MUSEUM DIRECTOR

Dear Students,

We here at your local science museum are excited to enlist your help on a new exhibit for our museum. As you know, the issue of rising global temperatures is a pressing one for society today. To address it, the museum would like you to develop an exhibit to help educate our visitors on the topic of climate and its changes over time. Your exhibit can be something that we display online or that we include as part of our permanent displays here at the museum.

Your exhibit will focus on one particular region that either your teacher assigns or that you choose. The exhibit should include information on the ice ages, their frequency and possible causes, and the impact they had on the landscape. It should also include information about climate data and trends for the last 100 years, and a prediction of how the region might be affected if these trends continue.

The exhibit should be based on reliable and appropriate data. The museum visitors should be able to make up their own minds about what is going on in today's climate trends. You should cite your sources. You can check with our museum curator or your teacher if you have questions about the final product.

Thank you for your expertise in making this display. The museum is looking forward to your creativity in making this difficult topic interesting, educational, and personal to the places we care about.

Sincerely,

Dr. S. F. Green, Museum Director
